It is close to the top of a high cliff on the southern shore of Lampedusa. The road near the village of San Fruttuoso, is extremely difficult to follow for a few kilometers. The car had to be towed to the top of the trail. The author is planning to go back there, to photograph the weather phenomena that happen in Bodhi's nest on a daily basis.#ifndef QJSON

Samsung has done some great stuff when it comes to software features. One of the first major software upgrades we received was the TouchWiz 5.0.2, which really improved the look and feel of Samsung's skin. It introduced a lot of interesting and useful features. If you have a tablet or a smartphone, chances are you are familiar with the TouchWiz UI. The system is fairly customizable and allows you to download skins from the Google Play Store. Samsung has also done a lot of work for third-party skins. When it comes to custom ROMs, Samsung tries to stay out of the way by allowing you to do everything on your own. If you want to know how to flash a custom ROM on your Samsung device, here is a step-by-step guide that shows how you can do just that. 1. Open the setting of your device using the stock navigation bar at the bottom of the screen. 2. Tap on About device, and look for the software update option. 3. Tap on it, and then tap on the Download button to open the software update menu. 4. Tap on the arrow next to the option called "Install." 5. Tap on the "Install now" button. 6. Your device should start downloading the required files. 7. Once the installation is complete, tap on the "Install" button to start the upgrade process. 8. Your device should reboot, and if it has been successfully flashed, you should see a new update on the "about phone" screen. If you are getting a failed flash error, first of all try to do a complete wipe and clear data to make sure that your phone is completely clean of all data and that the problem is not a corrupted cache. You should then try to disable the USB connection and then re-plug it. If you have still problems, don't get discouraged! We are here to help you if you are not sure how to root your Samsung device. Most of the smartphones nowadays have the option to unlock the bootloader by using the Backup Key that is installed on the device. This is a feature offered by Samsung, which allows you to backup the key you have using the USB drivers. If you want to find out how to unlock the bootloader on your Samsung device, then there are two ways to do that. Method 1 Restore to stock 1. Open the recovery mode
