The use of polymeric compositions in the manufacture of a variety of medical and veterinary products such as controlled release pharmaceuticals and diagnostic agents is well established in the art. Controlled release polymeric compositions can be prepared using either implantable or non-implantable systems such as microspheres. Non-implantable controlled release polymeric compositions are useful as diagnostic agents, for example, for blood glucose in diabetics. Release of the diagnostic agent is affected by the body's fluids and can be effected using a variety of mechanisms. These mechanisms include swelling, erosion, disruption and/or mechanical agitation. One known type of implantable microsphere releases a therapeutic agent slowly over a period of time. Examples of such microspheres include those disclosed in U.S. Pat. Nos. 4,652,441, 4,645,676, 4,673,542, 5,073,335, and 5,109,885. These references disclose the use of a biodegradable polymer, a therapeutic agent, and a biocompatible and biodegradable polymeric wall. As such, these microspheres are useful for the sustained release of the therapeutic agent. The polymeric compositions used to fabricate these microspheres are known in the art. However, in general, these polymeric compositions are based on either natural or synthetic polymers

**Bethesda**

The self-named, fifth most played game on the App Store currently has on average 1.16 million daily downloads and a little more than half a million paid accounts.

The game is a first-person shooter that's based on the popular shooter "Wolfenstein," but the Bethesda reps recently revealed that it "wasn't a big influence." They say that they're more interested in replicating the rhythm and feel of the first-person shoot'em ups of the 60s' and 70s', like the Golden Era title "Rogue Trooper" and classics like "Space Bombers."

The top three games on the list, based on number of paid accounts (and which made a whole lot of us scratch our heads and chuckle), are:

- 1) Gold> with 6.2M accounts
- 2) FIFA: Live 2013, 7.6M accounts
- 3) Star Wars Battlefront 2, 6.5M accounts

MOST IMPORTANT PLAYER INVESTMENTS THIS PAST SEASON Power through the midfield One of the biggest changes to the way players control the ball is their new Sling Pass attribute. The new capability allows the player to jump at any moment while holding their shot and instantly sling it in one direction or the other. This helps direct the ball more accurately, and create more goal-scoring opportunities. At set distances, the player will be able to pass the ball, but when they start sprinting, their ability to change direction when they sprint stops and they can't play a long pass.
